Note:

*Common Subject

**Exit Option (as per NEP): These 6 credits shall be counted only for those taking Exit Option for 2-year diploma.

• Direct entry students (not applicable for lateral entry students) may exercise exit option after 2nd Year for which he/she will be awarded UG diploma provided they secure an additional 6 credits through summer internships/ apprenticeship for two months/8 weeks after 4th Semester.

Dean - Academic

- The student concerned has to apply for UG diploma exit option at the time of filling up of end semester examination of 4th Semester (provided he has no back log up to 3rd semester). The evaluation of such candidates shall be done by the concerned department of Institution after successful completion of internship by the candidate.
- The course Internship-I will be completed by students during summer vacations after 4th semester under the supervision of faculty of department. The internship should, preferably, be focused on site EXPERMENTIAL LEARNING and CONTRIBUTION TO COMMUNITY for the benefit of local industry, government/private organization, entrepreneurs, craft and skilled people.
- The evaluation and viva voce of such candidates (who opted for UG Diploma) shall be done at the earliest possible, preferably within one month of running next semester, *i.e.*, 5thsem (and not with end semester exams of 5th semester).
- The student will be recommended for 2-Years'Diploma if has cleared all the four semesters without any back log in accordance with fulfillment of above requirements

Dean - Academic

Semester - III

				IKS-311 Indi	an Knowledge System		
Teaching Scheme			Mar	Duration of End			
L	Т	P	Credit	Internal Assessment	End Semester Exam	Total	Semester Examination
					Maximum Marks: 60	100	3 Hours
2	0	0	2	Minimum Marks: 16	Minimum Marks: 24	40	5 riours

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E will have short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-II, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Course Objectives:

- To equip the students with the knowledge and understanding related to Indian knowledge systems, origin, evolution and the approaches used in ancient and modern times.
- To promote the youths to do research in the various fields of Bhāratīya knowledge system.

Unit-I:

Bhāratīya Civilization and Development of Knowledge System: Genesis of the Bharatbhumi and Civilization, Discovery of the Saraswatī River, The Saraswatī-Sindhu Civilization, Traditional Knowledge System, The Ancient Education System, Brief Introduction of the Takṣaśilā University, The Nālandā University, Knowledge Export from Bharata.

Unit-II:

Art, Literature and Scholars: Natraja- A Masterpiece of Bhartiya Art, Introduction to Vedas and Vedic Literature, Life and Works of Agastya, Vālmīki, Patañjali, Vedvyāsa, Loapmudra, Maitreyi, Gārgī, Caraka, Suśruta, Kaṇāda, Kauṭīlya, Pāṇini, Āryabhaṭa, Varahmihira, Bhāskarācārya.

Unit-III:

Engineering Science and Technology: Engineering, Science and Technology in the Vedic Age, Post-Vedic Period, History of Mathematics in Bharata, Concepts of Zero, History and Culture of Astronomy in India, Kerala School of Astronomy and Mathematics.

Unit-IV:

Cultural Heritage and Indian Traditional Practices: Temple Architecture in Ancient India, Fairs and Festivals, Yoga, Āyurveda, Integrated Approach to Healthcare, Agriculture in Ancient India, Approaches and Strategies to the Protection and Conservation of Environment.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Understand and appreciate the rich heritage that resides in our traditions.
- 2. Improve mindfulness and more maturity leading to effective process of learning.

Text Books:

- Bhag Chand Chauhan, IKS: The Knowledge of Bharata, Garuda Prakashan, 2023.

				MEPC-311 F	Engineering Mechanics		
	Teaching Scheme			Mar	Duration of End		
L	T	P	Credit	Internal Assessment	End Semester Exam	Total	Semester Examination
3	1	0	4	Maximum Marks: 40 Minimum Marks: 16	Maximum Marks: 60 Minimum Marks: 24	100	3 Hours

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E will have short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Unit-I:

Introduction to Engineering Mechanics: Basic concepts, Laws of motion, Principle of transmissibility of forces; Resultants of force system: Parallelogram law, Forces and components, Resultant of coplanar concurrent forces, Components of forces in space; Moment of force - Principal of moment, Coplanar applications, Couple, Resultant of any force system.

Equilibrium of Rigid Bodies: Free body diagram, Types of supports, Equations of equilibrium, Stable equilibrium, Moments and couples, Moment of a force about a point and about an axis, Equilibrium of planer and spatial rigid body systems.

Unit-II:

Friction: Introduction, Theory of friction, Angle of friction, Laws of friction, Static and dynamic friction, Motion of bodies: Angle of repose, Angle of friction, Cone of friction, Motion on inclined rough surface, Lifting machines: Wedge, Screw, Screw-Jack, and Differential screw jack.

Centroid and Moment of Inertia: Centroid of plane, curve, area, volume and composite bodies, Moment of inertia of plane area, Parallel axes theorem, Perpendicular axes theorems, Principal moment inertia, Mass moment of inertia of circular ring, Disc, Cylinder, Sphere and Cone about their axis of symmetry.

Unit-III:

Structural Analysis: Plane truss, Space truss, Difference between truss and frame, Types of trusses, Analysis of plane truss – Method of sections, Method of joints, Graphical method.

Beams: Types of beams, Statically determinate beams, Shear force and Bending Moment in beams, Shear Force and Bending Moment diagram, Relationship between Shear force and Bending Moment.

Unit-IV:

Kinematics of Rigid body: Introduction, Plane Motion of Rigid Body - Rectilinear and curvilinear translation, fixed axis rotation and general plane motion; Relative Velocity; Problems.

Kinetics of Rigid Body: Introduction, Force, Mass and Acceleration, Equations of motion, Work and Energy, Impulse and Momentum, D' Alembert's Principles and Dynamic Equilibrium; Problems.

Course Outcomes (COs): After the completion of the course, the student will be able to:

1. Remember and understand the basic laws of engineering mechanics to effectively solve engineering problems.

2. Understand and apply the concepts of friction forces, the working of lifting machines, the centre

of gravity, and the moment of inertia.

- 3. Apply the principles of mechanics to draw shear force and bending moment diagrams for various structural elements.
- 4. Analyze truss structures to determine internal forces and ensure structural integrity.

5. Evaluate the motion of rigid bodies using kinematic principles.

6. Create solutions by formulating the concepts of kinetics as they apply to bodies in motion.

Teaching Scheme Credit		Cwadit	Mar	D			
L	Т	P	Credit	Internal Assessment	End Semester Exam	Total	Duration of End Semester Examination
3	0	0	3	Maximum Marks: 40 Minimum Marks: 16	Maximum Marks: 60 Minimum Marks: 24	100	3 Hours

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E will have short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory questionfrom section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-II, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus. Use of steam table and Moiller chart is allowed during the examinations.

Unit-I:

Fundamental Concepts: Macroscopic and microscopic viewpoints, Systems and control volumes, Properties of system, Continuum, State and equilibrium, Processes and cycles, Temperature and Zeroth law of thermodynamics, Heat and thermodynamics, Concept of work.

First Law of Thermodynamics: Statement, Heat and work calculations, Application of first law to non-flow and flow systems, Steady flow energy equation as applied to-boiler, condenser, throttle, nozzle, turbine, and compressor, PMM1.

Unit-II:

Second Law of Thermodynamics: Thermal energy reservoirs, Heat engine, Refrigerator, Heat pump, Statements and their equivalence, PMM2, Carnot cycle and Principles, Thermodynamic temperature scale.

Entropy: Clausius inequality, Entropy, Principle of entropy increase, First and second law combined, Entropy changes for perfect gas during reversible processes, Available and unavailable energy.

Property Relations: Maxwell relations, Clausius-Clapeyron equation, Volume expansivity and isothermal compressibility, Mayer relation, Joule-Thomson coefficient.

Properties of Steam: Phase transformation, Dryness fraction, Property diagrams, Steam tables, Mollier chart, First law applied to steam processes.

Unit-IV:

Power Cycles: Ideal Rankine cycle, Otto, Diesel, Dual cycles, Thermal efficiency, Mean effective pressures of air standard basis, Comparison of cycles.

Course Outcomes (COs): After the completion of the course, the student will be able to:

1. Demonstrate understanding of basic concepts of thermodynamics.

2. Differentiate between quality and quantity of energy, heat and work, enthalpy and entropy etc.

3. Indicate the importance of phase change diagrams of pure substance.

4. Analyze the performance of vapour power cycle.

5. Evaluate the performance of air standard cycles.

6. Apply the laws of thermodynamics to various real life systems.

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E will have short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-II, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Unit-I:

Introduction: Definition of fluid, Newton's law of viscosity, Units and dimensions, Physical properties of fluids, Control volume, Continuity equation and momentum equation, Incompressible flow, Bernoulli's equation and its applications.

Fluid Statics: Definition of body and surface forces, Pascal's law, Basic hydrostatic equation, Forces on surfaces due to hydrostatic pressure, Buoyancy and Archimedes principle, Meta center, Stability of floating and submerged bodies and manometers.

Unit-II:

Fluid Kinematics: Different approaches, Reynolds transport theorem, Flow visualization, Types of flow, Strain rate, stream line, streak line, path lines and stream tubes, Continuity equation in Cartesian coordinates in 3D forms, Velocity and acceleration of fluid particles, Velocity potential function and stream function.

Fluid Dynamics: Momentum equation, Navier Stoke equation, Development of Euler's equation, Bernoulli's equation and application, Steady and unsteady flow through orifice, Orifice placed in pipe, Venturimeter, Flow over triangular and rectangular notches, Pitot tube.

Unit-III:

Laminar Flow: Viscous/Laminar flow – Plane Poiseuille flow and Coutte flow, Laminar flow through circular pipes, Loss of head and power absorbed in viscous flow.

Turbulent Flow: Reynolds experiment, Frictional losses in pipe flow, Shear stress in turbulent flow, Major and minor losses (Darcy's and Chezy's equation), Flow through siphon pipes, Branching pipes and equivalent pipe.

Unit-IV:

Boundary Layer Flows: Concept of boundary layer and definition of boundary layer thickness, Displacement, momentum and energy thickness, Laminar and turbulent boundary layers, Laminar sub layer, Von Karman Momentum Integral equation for boundary layers, Analysis of laminar and turbulent boundary layers, Drag, Boundary layer separation and methods to control it, Streamlined and bluff bodies.

Dimensional Analysis: Buckingham's Pi theorem, Non – dimensional numbers and their application, Similitude, Scale effects.

Course Outcomes (COs): After the completion of the course, the student will be able to:

1. Apply basic laws and properties associated with the fluid.

- 2. Apply the equations of fluid statics to evaluate forces acting on different sections submerged
- Interpret the various flow and function types utilised in fluid kinematics.
- 4. Illustrate the principles used in fluid dynamics in various situation of fluid flow.
- 5. Understand the concept of boundary layer and analyse its effect in laminar and turbulent flow.
- 6. Evaluate the dimensional analysis to predict physical parameters that influence the flow in fluid mechanics.

L	T	P	Credit	Internal Assessment	End Semester Exam	Total	Duration of End Semester Examination
3	0	0	3	Maximum Marks: 40 Minimum Marks: 16	Maximum Marks: 60	100	3 Hours

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E will have short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Unit-I:

Introduction: Manufacturing and manufacturing processes, Classification of manufacturing processes Metal Casting Processes: Introduction, Basic steps in casting processes, Advantages and Limitations, Sand mold making procedure, Patterns and Cores. Pattern materials, Pattern allowances, Types of pattern, Colour coding, Moulding material, Moulding sand composition, and preparation, Sand properties and testing type of sand moulds. Types of cores, core prints, chaplets, chills. Gating systems and Casting Defects, Gates and gating systems, Risers, Melting practice, Cupola, Charge calculations.

Casting Cleaning and Casting Defects: Fettling, Defects in castings and their remedies, Methods of testing of castings for their soundness. Special Casting Processes: Shell molding, Precision investment casting, Permanent mold casting, Die casting, Centrifugal casting, and Continuous casting.

Unit-II:

Metal Forming Processes: Introduction to forming, Nature of plastic deformation, Hot working and cold working. Principles of rolling, Roll passes, Roll pass sequences. **Forging:** Forging operations, Smith forging, Drop forging, Press forging, Forging defects.

Extrusion and Other Processes: Extrusion principle, Hot extrusion, Cold extrusion, Wire drawing, Swaging, Tube making, **Sheet Metal Operation:** Press tool operations, Shearing action, Drawing dies, Spinning, Punching, Piercing, Bending, Stretch forming, Embossing and Coining.

Technical University :III-tinU

Welding and Welding Defects: Introduction to Welding, Gas and Arc Welding, Classification: Oxyacetylene welding equipment and techniques. Electric arc welding: Electrodes, Tungsten inert gas welding (TIG), Metal inert gas welding (MIG), Submerged arc welding (SAW), Resistance welding: Principle & types, Welding defects and remedies.

Other Joining Processes: Thermit welding, Electro slag welding, Electron beam welding, Forge welding, Friction welding, Diffusion welding, Brazing and soldering, Mechanical joining, Joining Plastic.

Unit-IV:

Plastic Manufacturing Processes: Classification of plastic materials, Manufacturing of plastic products,

Casting, Compression moulding, Transfer moulding, Injection Moulding, Extrusion, calendering, Blow moulding, Forming shaping methods, Laminating methods, Reinforced plastic moulding.

Powder Metallurgy: Introduction, Operation in powder metallurgy, Production of metal powders, Properties of metal powder, blending of metal powders, Compaction of metal powders, Sintering and secondary operation, Application of powder metallurgy.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Demonstrate an understanding of non-chip forming processes such as casting, forging, welding, etc.
- 2. Explain the various plastic manufacturing processes.
- 3. Understand basics of powder metallurgy.
- 4. Select appropriate production processes for a specific application.
- 5. Recommend materials in a manufacturing process based on their properties.
- 6. Apply appropriate manufacturing techniques for economic production.

Teaching Scheme Cred		Credit	Mar	Duration of End			
L	T	P	Credit	Internal Assessment	End Semester Exam	Total	Semester Examination
3	0	0	3	Maximum Marks: 40 Minimum Marks: 16	Maximum Marks: 60 Minimum Marks: 24	100	3 Hours

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E has short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-II, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Unit-I:

General Concept: Need and classification of measurements and instruments, Basic and auxiliary functional elements of a measurement system, Mechanical versus electrical/electronic instruments, Primary, secondary and Working standards.

Static and Dynamic Characteristics of Instruments: Range and span, Accuracy and precision, Calibration, Hysteresis and dead zone, Sensitivity and linearity, Threshold and resolution: speed of response, lag, fidelity and dynamic error, dead time and dead zone. Zero, first and second order systems and their response to step, Ramp and sinusoidal input signals. Error in measurement: sources of errors, systematic and random errors: statistical analysis of test data.

Unit-II:

Functional Elements: Review of electro-mechanical sensors and transducers - variable resistance, Inductance and capacitive pickups, Photo cells and piezo-electric transducers, and application of these elements for measurement of position/displacement, speed/velocity/acceleration, force and liquid level etc.

Strain Gauges: Resistances strain gauges, Gauge factor, Bonded and unbonded gauges, Surface preparation and bonding technique, Signal conditioning and bridge circuits, Temperature compensation, Application of strain gauges for direct, bending and torsional loads. 001

Unit-III:

Pressure and Flow Measurement: Bourdon tube, Diaphragm and bellows, Vacuum measurement - McLeod gauge, Thermal conductivity gauge and ionisation gauge, Dead weight gauge tester. Electromagnetic flux meters, Ultra-sonic flow meters and Hot wire anemometer: Flow visualisation technique.

Temperature Measurement: Thermal expansion methods - bimetallic thermometers, Liquid-in-glass thermometer and filled-in-system thermometers, Thermo-electric sensors-common thermocouples, reference junction considerations, Special materials and configurations: metal resistance thermometers and thermistors, Optical and radiation pyrometers, calibration, standards. Unit-IV:

Speed, Force, Torque and Shaft Lower Measurement: Mechanical tachometers, Vibration and Tachometer and Stroboscope, Proving ring, Hydraulic and pneumatic load cells, Torque on rotating shafts, Absorption, Transmission and Driving dynamometers.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Explain working principle of various measuring instruments.
- 2. Understand the output from different systems.
- 3. Identify and select proper measuring instruments for specific application.
- 4. Understand calibration methodology and error analysis related to measuring instruments.
- Develop various methods to minimize errors based on characteristics.
- 6. Formulate mathematical model and analyze system/process for standard input responses.

Text Books:

0	0	2	1	Maximum Marks: 30 Minimum Marks: 12	Maximum Marks: 20 Minimum Marks: 08	50 20	2 Hours

List of Experiments:

- 1. To determine the meta-centric height of a floating body.
- 2. To visualize two-dimensional flow (streamline flows) around and through models.
- 3. To visualize streamlines in flow around various bodies including sink source and potential flow analogy.
- 4. To visualize forced vortex, free vortex and determine rotational speed.
- 5. To show the velocity and pressure variation with radius in a forced vertex flow.
- 6. To determine the coefficient of discharge of venturimeter /orifice meter, pitot tube.
- 7. To determine the coefficient of discharge of Notch (V and Rectangular types).
- 8. To find critical Reynolds number for a pipe flow.
- 9. To determine the friction factor for the pipes.
- 10. To determine the minor losses due to sudden enlargement, sudden contraction and bends.
- 11. To design and plan a system installation of valves and fittings, piping elements and system as per process schematic.
- 12. To determine the pressure distribution around and calculate lift/drag on an aerofoil using wind tunnel apparatus.
- 13. To study flow separation, vortex formation and demonstration of Karman vortices.
- 14. To study the effect of water hammer and pressure surge in pipes.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Develop skills in accurately measuring fluid properties such as pressure, velocity, flow rate, and viscosity, and analyzing experimental data to draw valid conclusions.
- 2. Understand fundamental principles of fluid behavior through hands-on experiments.
- 3. Acquire familiarity with a range of equipment and apparatus used in fluid mechanics experiments, including understanding their operational principles and limitations.
- 4. Demonstrate knowledge of safety protocols specific to fluid mechanics laboratories, including proper handling of fluids, equipment setup, and emergency procedures.
- 5. Communicate experimental procedures, results, and conclusions effectively through structured lab reports, including graphical representations, calculations, and discussions of sources of error.
- 6. Collaborate effectively with peers in conducting experiments, sharing responsibilities, and discussing findings to enhance understanding and learning outcomes.

- 1. To make a pattern for a given casting gating system.
- 2. Prepare the mould and make the casting. Investigate the casting defects and suggest the remedial measures.
- 3. To prepare the aluminium metal matrix composites using permanent mould casting and study the physical, mechanical characteristics and microstructure using metallurgical microscope.
- 4. To prepare the aluminium metal matrix composites using centrifugal casting and study the physical, mechanical characteristics and microstructure using metallurgical microscope.
- 5. To study design for welding and make a component involving horizontal and vertical welding and study the welding defects and suggests their remedies.
- 6. To make a component involving horizontal/vertical welding and determine the weld quality using destructive testing such as tension test/ bend test/fracture toughness test.
- 7. To determine the weld quality using non-destructive testing such as liquid-penetrant/ultrasonic testing/magnetic particles/radiographic tests.
- 8. To study physical, mechanical characteristics and microstructure of the given specimen.
- 9. To study and demonstrate wire electrical discharge machining (w-EDM).
- 10. To study design for brazing, soldering and perform the soldering and brazing operations of metals.
- 11. To perform the MIG/TIG operation on metals.
- 12. To determining the strength of weld using UTM.
- 13. To study design for mechanical fastening and perform joining of sheet metal by riveting.
- 14. Development and manufacturing of complex sheet metal components such as funnel etc.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Gain proficiency in using manufacturing tools and equipment.
- 2. Demonstrate knowledge and practice of safety protocols specific to manufacturing environments, including proper use of personal protective equipment (PPE) and adherence to ethical standards.
- 3. Learn about different materials used in manufacturing, their properties, selection criteria, and appropriate handling techniques.
- 4. Develop skills in ensuring precision and quality in manufacturing operations, including measurement techniques, tolerance analysis, and inspection procedures.
- 5. Document manufacturing processes, procedures, and results effectively through technical reports, including detailing experimental setups, data analysis, and conclusions.
- 6. Enhance professionalism in manufacturing practices, including teamwork, communication skills, and understanding of industry standards and practices.

List of Experiments:

- 1. To study different types of gauges (Vernier caliper, Vernier Height gauge, Vernier depth gauge, Micrometer, Filler gauge, Go-nogo gauge, Plug gauge, Go-Nogo snap gauge).
- 2. To calibrate of linear measuring instruments by using slip gauges and calculation of percentage error.
- 3. To measure included angle of a given specimen using Sine Bar and Clinometers.
- 4. To measure diameter of small size hole using Tool Maker's Microscope.
- 5. To measure the pitch diameter of a screw thread by vertical Profile Projector.
- 6. To study working of various pressure measuring devices (Bourdon tube, U-tube and Inclined tube Manometer, Micro manometer).
- 7. To determine RPM and torque of a given motor using contact and non-contact techniques.
- 8. To determine velocity using hot-wire anemometer and vane anemometer.
- 9. To determine PIV and micro/nano PIV flow visualisation techniques.
- 10. To determine LDV and LIF flow visualisation techniques.
- 11. To calibrate RTD, thermocouple using temperature calibrator and temperature bath.
- 12. To calibrate pressure gauge using pressure calibrator.
- 13. To study viscoelastic behaviour of specimen using rheometer.
- 14. To perform tension/bending/torsion test each with strain gauge measuring points in full bridge circuit.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Students should be able to demonstrate a comprehensive understanding of various measurement techniques used in mechanical engineering, including both traditional and modern methods.
- 2. Gain practical experience in using measurement instruments commonly used in mechanical engineering.
- Develop the ability to perform measurements with a high degree of precision and accuracy, considering factors such as instrument limitations, environmental conditions, and calibration procedures.
- 4. Analyze measurement data critically, identify sources of error, and interpret results effectively to draw meaningful conclusions.
- 5. Acquire skills in documenting measurement procedures, recording data accurately, and presenting findings in a clear and structured manner, often through formal lab reports.
- 6. Collaborate effectively with peers in conducting experiments, sharing responsibilities, and contributing to group discussions and analyses.

Note:

*Common Subject

- **Exit Option (as per NEP): These 6 credits shall be counted only for those taking Exit Option for 2-year diploma.
- Direct entry students (not applicable for lateral entry students) may exercise exit option after 2nd Year for which he/she will be awarded UG diploma provided they secure an additional 6 credits through summer internships/ apprenticeship for two months/8 weeks after 4th Semester.
- The student concerned has to apply for UG diploma exit option at the time of filling up of end semester examination of 4th Semester (provided he has no back log up to 3rd semester). The evaluation of such candidates shall be done by the concerned department of Institution after successful completion of internship by the candidate.
- The course Internship-I will be completed by students during summer vacations after 4th semester under the supervision of faculty of department. The internship should, preferably, be focused on site EXPERMENTIAL LEARNING and CONTRIBUTION TO COMMUNITY for the benefit of local industry, government/private organization, entrepreneurs, craft and skilled people.
- The evaluation and viva voce of such candidates (who opted for UG Diploma) shall be done at the earliest possible, preferably within one month of running next semester, *i.e.*, 5th sem (and not with end semester exams of 5th semester).
- The student will be recommended for 2-Years'Diploma if has cleared all the four semesters without any back log in accordance with fulfillment of above requirements

	aching heme		C 1'4	Mar	ks Distribution		Duration of End
L	Т	P	Credit	Internal Assessment	End Semester Exam	Total	Semester Examination
3	3 1 0 4		4	Maximum Marks: 40 Minimum Marks: 16		100 40	3 Hours

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each (each subdivided into at least two equal sub-parts) and section E has short answer type questions consisting of six parts of 02 marks each or twelve parts of 01 mark each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the Section E will be compulsory. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-II, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Course Objective:

- To understand the basic probability concepts.
- To have an in-depth knowledge of standard distribution which can describe real life phenomena.
- To unerstand and characterize phenomena which evolve with respect to time in probabilisite manner.
- To analyse the response of random imputs to linear time invariant systems.

Course Contents:

Unit-I:

Probability Theory: Counting principles, Probability axioms, Sample space and events, Conditional probability & Baye's Theorem, Random variable, Discrete and continuous probability distribution, Expectation, Variance, Standard deviation, Joint probability distribution, Mass function, Distribution function, Marginal distribution function, Covariance.

Probability Distributions: Discrete Probability Distributions: Uniform, Bernoulli, Binomial distribution and Poisson distribution. Continuous Probability Distributions: Normal and exponential distribution.

Unit-II:

Sampling and Testing of Hypothesis: Basic sampling models, Sampling distribution of mean and standard deviation, Testing of hypothesis, Level of significance, Confidence intervals for known and unknown means, Simple sampling of attributes, Tests of significance for large samples, Comparison of large samples, Central limit theorem, Test of significance for two large samples, Student's t-test, Chisquare test, Goodness of fit, F-distribution.

Unit-III:

Solution of System of Linear, Transcendental Equations & Interpolation: Bisection method, Regula-Falsi method, Newton Raphson's method, Gauss elimination method, LU factorization method.

Introduction to interpolation, Lagrange's interpolation, Newton's divided difference interpolation, Difference operators and relations.

Dean - Academic
H.P. Technical Univ

H.P. Technical University Hamirpur - 177 001, HP

Unit-IV:

Numerical Differentiation & Integration: Numerical differentiation using forward difference, backward difference and central difference formula. Integration by trapezoidal and Simpson's rules $1/3^{\rm rd}$ and $3/8^{\rm th}$ rule.

Numerical Solution of Ordinary Differential Equations: Picard's method, Taylor series method, Euler's method, Modified Euler's method, Runge's and Runge-Kutta method.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Develop understanding of basics of probability theory.
- 2. Identify different distribution functions and their relevance.
- 3. Apply the concepts of probability theory to different problems.
- 4. Understand different numerical integration techniques and numerically solve differential equations.

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E has short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Course Contents:

Unit-I:

Impact of Jets and Water Turbines: Impact of jet on flat and curved plates, Types of hydro turbines - impulse and reaction, Definition of various turbine parameters like gross head, discharge, work done, input power, output power, efficiencies etc., Euler's equation applied to a turbine, Turbine velocities and Velocity triangles, Expression for work done.

Pelton Turbine: Components of Pelton turbine, Definition of design parameters like speed ratio, jet ratio, and estimation of various parameters like head, discharge, and efficiency etc., Determination of number of buckets, Performance characteristic curves.

Unit-II:

Reaction Turbines: Types of reaction turbines – Francis Turbine, Kaplan Turbine, Inward and outward flow, Radial mixed and axial, Elements of the turbine, Estimation of various working and design parameters, Performance characteristic curves of reaction turbines.

Similarity Relations in Turbines: Definition of unit quantities and specific quantities, Selection of turbines, Cavitation in turbines - causes, effects and remedies, Thomas cavitation parameter, Specific speed graphs, Determination of safe height of installation for the turbine, Draft Tube, Types of draft tube, Governing of turbines.

Unit-III:

Centrifugal Pumps: Classification, Velocity vector diagrams and work done, Hydraulic and manometric efficiency, Vane shape, Head capacity relationship and pump losses, Pressure rise impeller, Minimum starting speed, Multi-stage pumps, Similarity relations and specific speed, Net positive suction head, Cavitation and maximum suctions lift, Performance characteristics.

Unit-IV:

Reciprocating Pumps: Construction and operational details, Discharge coefficient, Volumetric efficiency and slip, Work and power input, Effect of acceleration and friction on indicator diagram (pressure – stroke length plot), Air vessels and their utility, Centrifugal v/s reciprocating pumps.

Miscellaneous Hydraulic Systems: Hydraulic Ram, Hydraulic intensifier, Hydraulic accumulator, Hydraulic lift.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Understand about testing of hydraulic turbines and pumps for performance at constant speed and head.
- 2. Demonstrate the knowledge of working, stages, performance characteristics, governing and selection of fluid machinery.
- 3. Solve analytical problems in fluid machines for incompressible fluid flows.
- 4. Evaluate how to measure pressure, discharge, and velocity of fluid flow in machines.
- 5. Analyze the appropriate pump based on the required flow rate and pressure rise to maximize pumping efficiency.
- 6. Develop a logical approach to solving engineering problems, detect the type of problems that can be solved with simple analytical processes.

The question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E has short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-II, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Course Contents:

Unit-I:

Introduction: Heat engines; Internal and external combustion engines; Classification of I.C. Engines; Cycle of operations in four strokes and two- stroke IC engines and their comparative study; Fuels: SI and CI engine fuels, Rating of fuels; Scavenging and scavenging blowers; Air standard cycles and Fuel air cycles, Variable specific heat and its effects, Dissociation and other losses, Actual cycles, Deviation of actual engine cycle from ideal cycle; TDC, BDC, Torque, Power.

Compression Ignition Engines: Combustion phenomenon in CI engines, Stages of combustion, Delay period, Knocking, Pressure-Crank angle diagram, Factors affecting combustion and knocking, Types of combustion chambers.

Spark Ignition Engines: Combustion, Combustion phenomenon in SI Engines, Ignition delay, Flame propagation, Pressure-Crank angle diagram, Abnormal combustion, Auto ignition, Detonation and Knocking, Factors affecting combustion and detonation, Types of combustion chambers.

Unit-II:

Fuel System – SI Engines: Theory of carburetion, Simple carburetor, Essential parts of modern carburetor, Types of carburetors, Types of fuel injection systems in SI engines, Continuous injection system, Timed injection system, Electronic Fuel Injection systems (EFIs)/MPFi, Working of Sensors, Functions of ECU in Petrol Engine. Spark Plug and its requirements, Battery, Magneto, Electronic ignition systems. GDI Technology, Turbo in Petrol Engines.

Fuel System – CI Engines: Fuel injection systems: Unit pump, Inline pump, Rotary pump, Engine governors: necessity and characteristics, Types of nozzle, Electronic diesel control, CRDi technology, System layout, Function of ECU in diesel engine, Working of sensors, Turbocharger and its types, VGT, Twin-turbo.

Unit-III:

Engine Lubrication: Types of lubricants and their properties, SAE rating of lubricants, Types of lubrication systems, Engine Cooling: Necessity of engine cooling, Disadvantages of overcooling, Cooling systems and their comparison: Air cooling, Liquid cooling, Supercharging/Turbo-charging: Objectives, Effects on power output and engine efficiency.

Engine Testing and Performance: Measurement of Brake Horse Power, Indicated Power, Fuel

Dean - Academic

H.P. Technical University Hamirpur - 177 001, HP Consumption, Air flow, BMEP, Performance characteristic of SI and CI Engines, Effect of load and speed on mechanical, indicated thermal, break thermal and volumetric efficiencies, Heat balance sheet.

Unit-IV:

After-Treatment Technologies: Working of catalytic converter & its types, SCR, DPF, DOC, POC, LNT. Exhaust Emissions: Homologation, Emission standards, Applicable standards in India, Future norms, and Significance of fuel in meeting emissions. Classification of segments, Emission test cycles, COP, Emission measurement techniques, On board diagnosis, OBDI, OBDII.

Alternate Fuels: Alcohol - Hydrogen - Natural Gas and Liquefied Petroleum Gas - Biodiesel- Biogas Properties - Suitability - Engine Modifications - Merits and Demerits as fuels.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Understand the basic thermodynamic principles and combustion processes that govern internal combustion engines, including air-fuel mixture preparation, ignition, combustion, and exhaust emissions.
- 2. Identify and explain the functions of major engine components and systems, including cylinders, pistons, valves, crankshaft, camshaft, fuel injection systems, and exhaust systems.
- 3. Analyze engine performance parameters under varying operating conditions.
- 4. Learn about emissions control technologies and regulations governing internal combustion engines, including strategies for reducing pollutants such as NOx, CO, and particulate matter.
- 5. Understand the properties of different fuels used in internal combustion engines and their impact on engine performance and emissions.
- 6. Apply knowledge of engine fundamentals to design considerations and optimization strategies, including improving efficiency, reducing friction losses, and enhancing performance.

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E has short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Course Contents:

Unit-I:

Introduction: Mechanism and machines, Kinematics links, Kinematic pairs, Kinematic chains, Plane and space mechanism, Kinematic inversion, Equivalent linkages, Four link planar mechanisms, Straight line mechanisms, Steering mechanisms, Pantograph.

Kinematic Analysis of Plane Mechanisms: Displacement analysis, General plane motion, Instantaneous center of velocity, Graphical and analytical methods of velocity and acceleration analysis.

Unit-II:

Cams: Classification of cams and followers, Disc cam nomenclature, Construction of displacement, Velocity and acceleration diagrams for different types of follower motions, Analysis of follower motions, Determination of basic dimension, Synthesis of cam profile by graphical approach, Cams with specified contours, Tangent and circular arc cams.

IInit-III

Belt, Rope and Chain drives: Introduction to belts, Ropes, Law of belting, Design of belt drives, Flat & v-belt drives, Conditions for transmission of maximum power.

Gears: Introduction, Terminology, Various types of gears and applications, Fundamental law of gearing, Gear profile, Involute, Cycloidal, Interference and undercutting. Spur gear: path of contact, arc of contact, minimum teeth to avoid interference, Introduction to helical, spiral bevel and worm gears. Synthesis of Gear Trains: Synthesis of simple, compound and reverted gear trains, Analysis of epicyclic gear trains.

Unit-IV:

Kinematic Synthesis of Mechanisms: Type, number and dimensional synthesis, Function generation, Path generation and body guidance two and three position synthesis of four bar and slider crank by graphical and analytical methods, *Freudenstein's* equation precision position, Structural error, *Chebychev* spacing, Transmission angle.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Understand the principles of kinematic pairs, chains and their classification, DOF, inversions, equivalent chains and planar mechanisms.
- 2. Analyze the planar mechanisms for position, velocity and acceleration.
- 3. Draw displacement diagrams and cam profile diagram for followers executing different types of motions and various configurations of followers.
- 4. Understand the basics of belt, rope and chain drives.
- 5. Apply the knowledge of gear and gear trains.
- 6. Demonstrate an understanding of kinematic synthesis of mechanisms.

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E has short answer type questions consisting of six parts of 02 marks each. The candidates will attempt five questions in all, i.e. one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Course Contents:

Unit-I:

Simple Stresses and Strains: Stress & Strain, Types of stresses and strains, elastic limit, Hooke's law, Stress-Strain diagram for ductile and brittle, Factor of safety, Poisson's ratio, Elastic constants, Young's Modulus, Shear Modulus, and Bulk Modulus, Relationship between elastic constants. Introduction to thermal stresses and strains.

Compound Stresses & Strains: Concept of surface and volumetric strains, Two – dimensional stress system, Complementary shear stresses at a point on a plane. Principal stresses & strains and principal planes. Mohr's circle of stresses, Numerical problems.

Unit-II:

Bending Stresses in Beams: Bending stresses in Beams with derivation of bending equation and its application to beams of circular, rectangular, I & T sections, Composite beams.

Columns & Struts: Columns under axial load, Concept of instability and buckling, Slenderness ratio. Derivation of Euler's formulae for the elastic buckling load. Euler's, Rankine Gordon's formulae, Johnson's empirical formula for axial loading of columns and their applications, Eccentric compression of a short strut of rectangular & circular sections, Numerical problems.

Unit-III:

Slope & Deflection: Relationship between bending moment, Slope & deflection, Method of integration, Macaulay's method, Mohr's theorem-moment area method. Calculations for slope & deflection of (1) cantilevers and (2) simply supported beams with or without overhang, under concentrated loads, uniformly distributed loads, or combination of all of these types of loads, Numerical problems.

Unit-IV:

Theories of Elastic Failure: Various theories of elastic failure with derivations and graphical representations, Applications to problems of two-dimensional stress systems with (i) Combined direct loading and bending and (ii) Combined torsional and direct loading, Numerical problems.

Thin and Thick-Walled Pressure Vessels: Derivation of hoop & longitudinal stresses & strains in cylindrical & spherical vessels under internal pressure, Change in volume of vessel under pressure, Derivation of equations for radial & hoop stresses and strains in thick cylinders and compound cylinders.

Dean - Academic H.P. Technical University Hamirpur - 177 001, HP

STE of

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Differentiate between various mechanical properties, stresses, failure criteria etc.
- 2. Understand the concepts and theories related to bending, column & struts, slope and deflection, elastic failure and pressure vessels.
- 3. Analyze the member under consideration using the concepts, principles and theories of strength of materials.
- 4. Recommend the dimensions of the mechanical member providing the reasoned argument for the same, under given loading/stress conditions.
- 5. Predict the mechanical behaviour of the member under given (or real-life) conditions so as to ensure safety of design.
- 6. Apply concepts of strength of materials to real time engineering problems.

In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-III and Unit-IV respectively and Section-E will cover the whole syllabus.

Course Contents:

Unit-I:

Fundamentals of Artificial Intelligence (AI): Introduction to AI, History of AI, General applications of AI, Need of AI in Engineering, Problem solving, Process of problem solving, breadth first search, depth first search, heuristics search techniques, best first search, Introduction to intelligent systems, Various approaches to AI: Cybernetics and brain simulation, Symbolic, Sub-symbolic, Statistical. Ethical and Social Implications of AI: Ethical considerations in AI development and deployment, Impact of AI on jobs and society, Regulatory and policy issues.

Unit-II:

Fundamentals of Machine Learning (ML): Introduction to Machine Learning, datasets, Forms of Learning: Supervised and Unsupervised Learning, reinforcement learning, processes involved in Machine Learning, Applications of ML in Engineering. **Data Preprocessing, cleaning and normalization Approaches in Machine Learning (ML):** Data preprocessing, Data cleaning, Feature selection and extraction, Data normalization and scaling.

Unit-III:

Artificial Neural Networks: Introduction to Artificial Neural Networks (ANNs): Definition and history of ANNs, Types of ANNs architectures, Basic architecture of ANNs, Activation functions, Singled-Layered and Multi-Layered Perceptron, Backpropagation algorithms, Applications of ANNs in Engineering.

Unit-IV:

Fuzzy Logic and Genetic Algorithm: Introduction to Fuzzy Logic: Basic concepts, history, and fuzzy set theory. Processes in a fuzzy logic system, Applications of Fuzzy Logic in Engineering.

Genetic Algorithm (GA): Basics of GA, Main operations of GA, Flowchart of GA, Working principle of GA in step by step, Applications in Engineering.

Course Outcomes (COs): After the completion of the course, the student will be able to:

1. Remember the fundamentals, history, and applications of AI in mechanical engineering.

- 2. Understand various AI approaches, including cybernetic, symbolic, sub-symbolic, and statistical methods, in mechanical engineering.
- 3. Apply data preprocessing techniques like cleaning, feature selection, and normalization in machine learning.
- 4. Analyze the ethical and social implications of AI, including job impacts and regulatory issues.
- 5. Evaluate machine learning algorithms, neural networks, and fuzzy logic systems for mechanical engineering applications.

4	U	U	2	Minimum Marks: 16	Minimum Marks: 24	40	3 Hours	

Question paper of end semester examination will be of 60 marks. The question paper will consist of five sections A, B, C, D and E. Sections A, B, C and D will have 2 questions of 12 marks each and section E has short answer type questions consisting of six parts of 02 marks each. The candidate will attempt five questions in all, i.e., one question each from sections A, B, C, D and the compulsory question from section E. In the question paper, the questions available in sections A, B, C and D will be covered from Unit-I, Unit-III and Unit-IV respectively and section-E will cover whole syllabus.

Course Learning Objectives:

- Understand the basic definitions, nature, scope, and significance of economics.
- Learn about the elasticity of demand, its types, methods of measurement, and its importance in economicanalysis.
- Examine price determination under different market structures, including perfect competition, monopoly,monopolistic competition, and oligopoly.
- Explore the meaning, types, theories, causes, effects, and control measures of inflation.

Unit-I

Introduction: Definition, Nature, Scope, Importance and significance of Economics, Distinction between Microeconomics and Macroeconomics. Concept of Utility and Its Types. **Demand and Supply:** Meaning, Demand Function, Law of Demand. Elasticity of Demand, Types, Measurement and importance. Demand Forecasting and its techniques. Concept of Supply, Law of supply.

Unit-II

Production Function: Concept and types, Returns to Factor and Returns to Scale, Law of Variable Proportions. **Cost and Revenue:** Concept of Cost, Short run and Lung-run Cost Curves, Relationships among various costs, Break-even Analysis. Revenue: Concept and its types.

Unit-III

Market Structure: Price Determination under Different Market Structure i.e. Perfect Competition, Monopoly, Monopolistic Competition Oligopoly. Reserve Bank of India: Nature, Organisation Structure, Objectives, Function of RBI. Monetary Policy and Fiscal Policy: Meaning, Objectives and Its tools and Techniques of Monetary and Fiscal Policy.

Unit-IV

National Income: Definition of National Income and its Aggregates, Methods of Calculating National Income. Inflation: Meaning, Types, Theories, Causes, Effects and Control. Business Cycle – Meaning- Phases of business cycle.

Course Learning Outcomes (CLOs):

After the completion of the course, the student will be able to:

- Identify the determinants of supply and demand; demonstrate the impact of shifts in both market supply anddemand curves on equilibrium price and output.
- Determine the roles that prices and markets play in organizing and directing economic activity
- Calculate and graph the short-run and long-run costs of production, supply and demand elasticities.
- Describe governmental efforts to address market failure such as monopoly power, externalities, and publicgoods.
- Examine and interpret a nation's economic performance indicators such as economic growth, unemployment and inflation from a macroeconomic perspective.
- Articulate the mechanics and institutions of international trade and their impact on the macro economy.

List of Experiments:

- 1. To determine the coefficient of impact for vanes.
- 2. To study the constructional details and performance characteristics of a Pelton turbine.
- 3. To study the constructional details and performance characteristics of a Francis turbine.
- 4. To study the constructional details and performance characteristics of a Kaplan turbine.
- 5. To study the constructional details and performance characteristics of a Centrifugal Pump.
- 6. To perform experiments (assembly) with pumps, valves and fittings and pipe sections.
- 7. To study the operating behaviour of centrifugal pumps in individual or series parallel operation.
- 8. To measure the net-positive suction head (NPSH) value of centrifugal pumps.
- 9. To study the constructional details and performance characteristics of a reciprocating pump.
- 10. To study the operating behavior of reciprocating pumps in individual or series parallel operation.
- 11. To study cutaway models of valves (NRV, Gate vale, Ball valve, Butterfly valve, Angle seat valve, Safety valve, 3-way plug valve, strainer) with flange fittings.
- 12. To perform maintenance and repair exercises on a normally primed centrifugal pump (including shaft gland sealing, ring seal etc.).
- 13. To perform alignment of a standard pump and its drive motor.
- 14. To study the constructional details of a Hydraulic Ram and determine its various efficiencies.

Dean - Academic

H.P. Technical University Hamirpur - 177 001, HP

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Gain practical skills in operating and handling different types of fluid machines such as pumps, turbines, and ram.
- 2. Understand the operational principles and performance characteristics (such as efficiency, power output, and pressure ratios) of fluid machines under different operating conditions.
- 3. Learn to use measurement instruments such as flow meters, pressure gauges, temperature sensors, and torque meters to collect data and analyze performance parameters of fluid machines.
- 4. Develop proficiency in conducting experiments to study the performance curves, characteristic curves (e.g., head-flow curve for pumps), and efficiency maps of fluid machines.
- 5. Document experimental procedures, results, and conclusions in technical reports, including graphical representations, calculations, error analysis, and discussions.
- 6. Work effectively in teams to conduct experiments, share responsibilities, and discuss findings, demonstrating professionalism, teamwork, and communication skills.

0	0 0 2 1		1	Maximum Marks:30	Maximum Marks:20	50	2.11
U			1	Minimum Marks:12	Minimum Marks:08	20	2 Hours

List of Experiments:

- 1. To study the construction details of 2-stroke and 4-stroke engines.
- 2. To perform Morse test on engine (4 stroke petrol engine).
- 3. To perform speed test on engine (4 stroke petrol/diesel engine).
- 4. To perform load test (Rope Brake/Eddy Current/Hydraulic dynamometer) on engine (4 stroke petrol/diesel engine).
- 5. To perform heat balance test on engine (4 stroke petrol/diesel engine).
- 6. To study the difference between carburetors based fuel system & EFI.
- 7. To study the difference between inline pump, rotary pump &CRDi system for a four-cylinder diesel engine.
- 8. To study the effect of variable injection timings on combustion characteristics of a single cylinder diesel engine with exhaust gas analysis.
- 9. To study the effect of spark timing & lambda on single cylinder petrol engine with exhaust gas analysis.
- 10. To study the effect of spark timing &lambda on multi-fuel engine with exhaust gas analysis.
- 11. To study the construction details of ignition system (Battery, Magneto, Electronic).
- 12. Develop schematic block diagram of electric vehicle, and hybrid vehicle.
- 13. To study the speed control (forward and reverse) of electric vehicle using throttle and analyse the torque production.
- 14. Measurement of DC-link current, voltage and BMS data of electric vehicle/hybrid vehicle.

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Measure and analyze engine performance parameters and emissions using appropriate tools and techniques.
- 2. Understand the impact of different types of fuels on engine performance and emissions.
- 3. Examine emerging technologies and alternative fuels aimed at reducing these impacts.
- 4. Demonstrate knowledge of safety protocols specific to internal combustion engine laboratories, including proper handling of fluids, equipment setup, and emergency procedures.

H.P. Technical University Hamirpur - 177 001, HP

- 5. Communicate experimental procedures, results, and conclusions effectively through structured lab reports, including graphical representations, calculations, and discussions of sources of error.
- 6. Collaborate effectively with peers in conducting experiments, sharing responsibilities, and discussing findings to enhance understanding and learning outcomes.

				MaximumMarks:30	MaximumMarks:20	50	2 11
0	0	2	1	MinimumMarks:12	MinimumMarks:08	20	2 Hours

List of Experiments:

- 1. To study the Brinell and Rockwell hardness testing machine & compare hardness of at least two types of materials/alloys.
- 2. To study the Vickers hardness testing machine & perform Vickers hardness test& compare hardness of at least two types of materials/alloys.
- 3. To study the impact testing machine and perform the impact tests (Izod & Charpy).
- 4. To perform tensile, compression test on universal testing machine.
- 5. To perform bending, shear test on universal testing machine.
- 6. To perform the torsion test on mild steel/aluminium/metal-alloy.
- 7. To perform fatigue test on mild steel/aluminium/metal-alloy.
- 8. To find Young's Modulus of abeam (rectangular/triangular/circular section) using deflection of beam apparatus.
- 9. To perform investigation of the deformation of statically determinate trusses.
- 10. To measure forces in a statically determinate and statically indeterminate plane truss.
- 11. To perform investigation of stresses in a thin-walled vessel under internal pressure.
- 12. To perform the demonstration of 4 cases of Euler elastic buckling of columns.
- 13. To experimentally perform bending on symmetrical and unsymmetrical cross-sectional profiles: I, L and U.
- 14. To perform experimental verification of stress hypothesis (*Rankine & Tresca yield criterion*) by multi-axial loading of different test specimens.

Course Outcomes (COs): After the completion of the course, the student will be able to:

1. Identify and explain the mechanical properties of materials such as tensile strength, compressive strength, elasticity, ductility, and hardness etc.

2. Demonstrate an understanding of stress-strain relationships and be able to interpret stress-strain curves for different materials.

H.P. Technical University Hamirpur - 177 001, HP

- 3. Develop practical skills in conducting experiments to test material properties, including tensile tests, compression tests, bending tests, and hardness tests etc.
- 4. Learn to collect, analyze, and interpret experimental data, to evaluate material behavior under different loading conditions.
- 5. Develop the ability to document their experimental procedures, results, and analyses in clear and concise technical reports.
- 6. Improve their ability to work effectively in teams, coordinating with peers to complete experiments and analyze results.

List of Experiments:

- Practicals shall be conducted after discussing briefly about topics mentioned here in 1st session and in other sessions just before each relevant practical. The topics which may be introduced to students shall include: Introduction to BIS specification sp: 46- 1988 Code of engineering drawing limits, fits and tolerances (dimensional and Geometrical tolerance), surface finish representation. gear terminology. I.S convention of assembly of spur gears, helical gear, bevel gears, worm and worm wheel. Getting orthographic views from isometric views of machine parts / components, dimensioning on CAD software, sectioning on CAD software.
- The practicals shall be performed *after setting up of drawing environment in CAD software* by setting drawing limits, drawing units, naming the drawing, naming layers, setting line types for different layers using various type of lines in Engineering drawing, saving the file with dwg. Extension/appropriate extension.
- 1. Preparation of drawing of an industrial component with Limits, Fits and Tolerances on CAD software.
- 2. Preparation of drawing of Rivets and Riveted joints on CAD Software.
- 3. Preparation of related to Welds and Welded joints on CAD software.
- 4. Draw quarter sectional isometric view of Keys, Cotters and Shaft Joints.
- 5. Draw different types of bolts and nuts with internal and external threading in Acme and square threading standards. Save the bolts and nuts as blocks suitable for insertion.
- 6. Draw a 3D model of a machine component using 3D primitives and using commands like Union. Subtraction, Revolve, Slice, Rotate 3D etc. Calculate surface Area, Mass, Centre of Gravity and Mass moment of inertia using inquiry commands render the figure made and attach a material to the figure.
- 7. Draw 3D model of protected type flange coupling.
- 8. Draw an assembly of Jigs & Fixture in 3D.
- 9. Draw 3D model of Assembly of Plummer Block.
- 10. Draw 3D model of Assembly of Foot Step Bearing
- 11. Draw 3D model of Assembly of Screw Jack.
- 12. Draw 3D model of Assembly of Connecting Rod.
- 13. Draw 3D model of Assembly of Crane Hook.
- 14. Draw 3D model of Assembly of Lathe Tailstock.

Dean - Academic

H.P. Technical University Hamirpur - 177 001, HP

Course Outcomes (COs): After the completion of the course, the student will be able to:

- 1. Develop proficiency in creating detailed technical drawings of machine components, adhering to industry standards and conventions.
- 2. Create and interpret various views/projections of mechanical components.
- 3. Gain proficiency in using CAD software to create precise 2D and 3D models of mechanical components and assemblies.
- 4. Create assembly drawings, showing how individual components fit together to form a complete machine or system.
- 5. Enhance their ability to work collaboratively in teams, communicating effectively with peers.
- 6. Develop the ability to document their design process and present their work clearly and professionally in technical reports.

Exit Option for UG Diploma in Mechanical Engineering

	etron	4,192		ME-416	P Internship-I		
	Teaching Scheme		Credit	Marks Distribution			Duration of End
L	T	P		Internal Assessment	End Semester Exam	Total	Semester Examination
0	0	0	6	Maximum Marks: 30	Maximum Marks: 20	50	3 Hours

Eligibility for Exercising Exit Option and Pursuing Internship-I:

Those students without any backlogs who wish to leave the studies after completion/end of 2nd year, can exercise exit option for UG Diploma in Engineering during registration for 4th semester (only for regular students (admitted in first year) and not applicable for lateral entry students). They will be required to obtain additional 6 credits summer internship (Internship-I (Exit)) of 8-weeks/2-months duration during summer term/summer vacations after 4th semester. The evaluation of such candidates shall be done within the first-two months of the running next semester i.e. 5th sem. The internship shall be completed by student during summer vacations after 4th semester, in local industry, government/private organization, entrepreneurs, craft and skilled persons for on-site experiential learning.

List of activities/projects to be completed by student:

- 1. The appropriate area of internship shall be identified by student in consultation with the faculty mentor and industrial supervisor (if any) during the course of 4th semester, by learning all concepts being taught in previous semesters and demonstrating hard work and genuine desire to learn.
- 2. The student shall clearly state in his brief report to faculty supervisor regarding (a)What he/she intends to learn, acquire and clarify through this internship? (b) Use of try to use concrete, measurable terms in listing his/her learning objectives under each of the following categories:
 - a) Knowledge and Understanding
 - b) Skills
- 3. The student will clearly state and describe in his brief reports regarding
 - a) *Learning Activities*: How will internship activities enable him/her to acquire the knowledge/understanding, and skills listed to be acquired by students (above)?
 - b) On the job: How internship activities will enable him/her to meet his/her learning objectives. Student should include projects, research, report writing, conversations, etc., which student will do while working, relating them to what he/she intends to learn.
 - c) *Teaching/Mentoring Activities:* How his/her technical knowledge can be applied at the site of the internship to create value through mentoring/help people learn new things.
 - d) *Off the job:* List of appropriate study material for reading, writing, method to keep contact with faculty supervisor, peer group discussion, field trips, observations, etc., he/she will make and carry out which will help him/her to meet his/her learning objectives.
 - e) *Evidences:* Student will describe in detail what other evidence he/she will provide to attached faculty mentor to document what was learnt (e.g. journal, analytic paper, project, descriptive paper, oral presentation, etc.) Deadline dates should be included.
 - f) *Evaluation:* The faculty or internship supervisor will provide a written evaluation, preferably in a tabular format, and by defining rubrics used for evaluation of internship.
 - g) The Internship Job Description: Student will describe about role and responsibilities while on his/her internship. (in as much detail as possible), about list of assigned /expected duties, project to be completed, deadlines, etc., and description of contribution expected by the organization/site of internship.
- 4. The internship will be defended by student during 5th semester in front of appropriate committee (including faculty/ internship supervisor) as per schedule notified by academic department. The concerned department will review the Internship-I rigorously to discourage low quality internship work and to avoid exit options as an escape route, rather than a genuine learning curve.
